Instra

Instra makes every effort to protect our customers by providing state of the art security features as well as providing additional options to enhance those features to protect you and your online business.

We take your security serious and that is why we ensure every one of our customers see the importance of a very valuable security feature: *Registry Lock*.

Registry Lock: an effective and preventive step that helps to increase the security of your domains. Providing visitors to your site with the reassurance that their information will remain safe not transferred to third-parties in result to security issues regarding an inactive registry lock.

What is a Registry Lock?

A registry lock will lock your domain name or record at the registry level and prevent it from being transferred, deleted or modified by any third party.

How do I get a Registry Lock for my website?

- Contact Customer Service to enroll in the Registry Lock service
- Visit our website to learn more

Benefits:

- ✓ Gain customer trust
- ✓ Security indicators give shoppers confidence
- ✓ Reduce identity theft by taking the proper precautions
- ✓ Reassure new customers their security is important to you

Remember:

If a domain name is in a registry lock status, server transferring, server deleting and server updating are prohibited.

Rest assured when it comes to protecting your business and your customers, Instra has 24 hour customer support – The security and confidence you expect.
